# BRAVO Printing Technologies

printer.bg

printer.bg e registered trademark of bravo printing technologies - a company founded in 1998.

following trends and technological developments worldwide, and prompted by a desire to satisfy the needs of our customers in 2005 was created the division printer.bg for wide-format digital printing needs for the advertising industry in the region. gaining experience, confidence and satisfied customers continued to invest in large-format printing equipment and created a base with the potential to express the performance of contracts with various sizes and print quality. we know, there are no small customers - we deliver printing to advertising agencies, media shops, builders, designers, manufacturers, individuals, distributors and all those who need fast and a quality made product at a reasonable price. Today, we can say that printer.bg is a powerful tool for visualizing your wide-format messages. and this is due to several factors:

incredible team - highly motivated and ambitious people with average age of under 30 years - welcoming new and different and willing to experiment;

careful chosen equipment - machines for all cases, and not a machine for each case, we know that there is no "universal machine", so we rely on five solvent and a textile printer with a different width, speed and print quality, but equally good reliability and ease of service.

our customers - always loyal but demanding prepared to support and encourage us all these years.
